

**Order of operations practice:**

Use the order of operations correctly to calculate:

|                                             |                                             |
|---------------------------------------------|---------------------------------------------|
| 1. $12 - 4 + 3$                             | 7. $8 - 5 + 2$                              |
| 2. $90 \div 5 \div 2 \times 3$              | 8. $30 \div 3 \div 2 \times 5$              |
| 3. $5 \cdot 6^2 \div 9$                     | 9. $3 \cdot 4^2 \div 2$                     |
| 4. $100 - 5 \cdot 3^2 + 12 \div 3 \times 4$ | 10. $50 - 3 \cdot 2^2 + 12 \div 2 \times 3$ |
| 5. $7 + 2 \cdot 4 - 3$                      | 11. $3 + 3 \cdot 3 - 3$                     |
| 6. $\frac{9+15}{6-2}$                       | 12. $10 + 30 \div 5 \times 2$               |
|                                             | 13. $\frac{10+30}{5 \times 2}$              |

**Order of operations practice:**

|                                             |                                             |
|---------------------------------------------|---------------------------------------------|
| 1. $12 - 4 + 3$                             | 7. $8 - 5 + 2$                              |
| 2. $90 \div 5 \div 2 \times 3$              | 8. $30 \div 3 \div 2 \times 5$              |
| 3. $5 \cdot 6^2 \div 9$                     | 9. $3 \cdot 4^2 \div 2$                     |
| 4. $100 - 5 \cdot 3^2 + 12 \div 3 \times 4$ | 10. $50 - 3 \cdot 2^2 + 12 \div 2 \times 3$ |
| 5. $7 + 2 \cdot 4 - 3$                      | 11. $3 + 3 \cdot 3 - 3$                     |
| 6. $\frac{9+15}{6-2}$                       | 12. $10 + 30 \div 5 \times 2$               |
|                                             | 13. $\frac{10+30}{5 \times 2}$              |
